**CODING PROJECTS**

**TRAILMIXER**
Deployed website: https://lucasbryg.github.io/Group-Project-1/

This application is designed to take a user location and search for hiking trails around that location. The app will also display the weather forecast as well as the difficulty of the trail.

Technologies:

- Html
- jQuery
- Visual Studio Code
- Materialize
- Open Weather API
- Hiking Project API

**WEATHER DASHBOARD**
Deployed Website: https://nickgdam.github.io/Homework-6/

This application is designed for the user to enter a city, and be presented with the weather forecast for the next 5 days. Once the forecast is displayed, the city is saved to local storage so the user can view the weather for that city the next time they open the app.

Technologies:

- HTML
- Javascript
- Bootstrap
- Moment.js
- Open Weather API

**WORKDAY SCHEDULER**

Deployed site: https://nickgdam.github.io/Homework5/

This application is designed to help the user plan a busy workday. When the application is loaded at the beginning of the day, all timeslot will be green. The user can enter specific tasks that need to be completed by the hour. The tasks will all save to local storage. When we enter the current timeslot, the row will turn red. Once the time has shifted into the next hour, the time blockthat have been passed will turn grey.

Technologies:

- HTML
- Javascript
- Bootstrap
- Moment.js
- Jquery
